

JAMES WAL HIGH SCHOOL

THE BUFFALOES

PROJECT PROPOSAL OF SCHOOLS
AND ADMINISTRATIVE STRUCTURE

MUSOKE JAMES WALAKIRA

Schools & Departments

Jameson High School proposes to operate through Thirteen (13) schools, each focusing on specific area of learning to promote specialization, creativity and practical skills development. This structure will enable students to discover their talents and potential early while receiving balanced academic and co-curricular training.

TABLE OF CONTENT

1. School of Curriculum Education	1
2. School of I.C.T	2
3. School of Fine and Performing Art	3
4. School of Sports	4
5. School of Hair Dressing	5
6. School of Agriculture	6
7. School of Fashion Design	7
8. School of Shoe Making	8
9. School of Journalism	9
10. School of Construction and Brick making	10
11. School of Metal Mechanics	11
12. School of Driving	12
13. School of Cookery	13
14. Administrative Structure	14

1. School of Curriculum Education

This school of General Education will focus on providing learners with a strong academic foundation. It offers core subjects such as Mathematics, English, Chemistry, Physics, Biology among others. The school aims to develop critical thinking, communication skills and problem solving abilities among students.

2. School of ICT (Information and Communication Technology)

The school of ICT equips students with digital skills needed in the modern world. It focuses on innovation, creativity and practical application of technology to solve real life problems.

-Website Designing

This area trains students in creating and managing websites. Learners gain skills in web design, basic coding, graphics and user experience design, preparing them for online communication and digital entrepreneurship.

-Software Design and Engineering

This section introduces students to Software development and system design. It emphasizes logical thinking, problem solving and building functional digital solutions.

-Robotics

Robotics exposes students to automation and engineering fundamentals. Learners study electronics, coding and mechanical systems to design and build simple robots, encouraging innovation, teamwork and practical STEM skills.

3. School of Fine and Performing Art

The School of Fine Art nurtures creativity, artistic expression, and practical skills in visual and performing arts. It provides learners with opportunities to explore talent while developing professional and technical abilities.

-Fine Art

This area focuses on drawing, painting, sculpture, and other visual arts. Students develop creativity, imagination, and artistic techniques for personal expression and creative careers.

-MDD (Music, Dance, and Drama)

MDD develops performance skills through music, dance, and drama. Learners build confidence, teamwork, cultural awareness, and communication skills through stage performances and creative expression.

-Studio Management

Studio Management introduces students to the organization and operation of art studios. It covers equipment handling, production planning, safety, and basic creative entrepreneurship.

-Filming

Filming trains students in video production, camera operation, directing, and editing. Learners gain practical skills for storytelling, media production and digital content creation.

4. School of Sports

The School of Sports focuses on developing physical fitness, teamwork, and discipline among learners. It provides structured training in various sporting activities to promote healthy lifestyles and competitive excellence.

Students are trained in different sports such as athletics, football, basketball, netball, volleyball and indoor games. The school also emphasizes sportsmanship, leadership, and talent development, preparing learners for competitions, scholarships, and careers in sports-related fields

5. School of Hair dressing

The School of Hair Dressing equips learners with practical skills in hair care, styling, and grooming. It focuses on creativity, professionalism, and personal hygiene in the beauty industry.

Students are trained in hair styling, cutting, braiding, treatment, and basic salon management. The school prepares learners for self-employment, further training in beauty therapy, and careers in the hair and beauty industry.

6. School of Agriculture

The School of Agriculture focuses on equipping learners with practical agricultural skills and knowledge for sustainable food production and agribusiness. It combines theory with hands-on training to prepare students for modern farming practices and self-reliance.

Students are trained in livestock farming, including goat farming, cattle rearing, and poultry production, where they learn animal care, feeding, breeding, disease control, and farm management. The school also emphasizes crop production, with a special focus on banana cultivation, covering land preparation, planting, pest control, harvesting, and value addition.

Through practical fieldwork and guided projects, the School of Agriculture promotes innovation, entrepreneurship, and environmental conservation, preparing learners for careers and business opportunities in the agricultural sector.

7. School of Fashion Designing

The School of Fashion Designing develops learners' creativity and technical skills in clothing and textile production. It focuses on design, innovation, and practical craftsmanship in the fashion industry.

Students are trained in fashion illustration, garment construction, tailoring, fabric selection, and basic textile technology. The school also introduces learners to fashion trends, entrepreneurship, and brand development, preparing them for careers in fashion design, tailoring, and self-employment

8. School of Shoe making

The School of Shoe Making equips learners with practical skills in footwear design and production. It focuses on craftsmanship, creativity, and technical knowledge required in the footwear industry.

Students are trained in shoe design, pattern making, cutting, stitching, finishing, and repair. The school also introduces basic entrepreneurship and quality control, preparing learners for self-employment, small-scale manufacturing, and careers in the leather and footwear sector

9. School of Journalism

The School of Journalism trains learners in the art and science of reporting, writing, and media communication. It focuses on developing critical thinking, ethical reporting, and effective storytelling skills.

Students are exposed to news writing, feature writing, editing, photography, radio and television production, and digital media. The school prepares learners for careers in print, broadcast, and online journalism, as well as media management and communication-related professions

10. School of Construction and Brick making

The School of Construction and Brick Making equips learners with practical skills in building, masonry, and construction management. It focuses on developing technical expertise, craftsmanship, and problem-solving abilities in the construction industry.

Students are trained in brick making, bricklaying, building design, construction techniques, and site management. The school also emphasizes safety practices, project planning, and basic entrepreneurship, preparing learners for careers in construction, civil engineering support, and self-employment in building-related trades

11. School of Metal mechanics

The School of Metal Mechanics trains learners in the practical and technical skills required for working with metals. It focuses on craftsmanship, problem-solving, and engineering fundamentals for industrial and mechanical applications.

Students are taught metal fabrication, welding, shaping, cutting, and machinery maintenance. The school also introduces basic design principles, safety procedures, and entrepreneurship, preparing learners for careers in metalwork, manufacturing, and small-scale industrial enterprises

12. School of Driving

The School of Driving and Mechanics equips learners with practical skills in vehicle operation, maintenance, and repair. It focuses on road safety, technical competence, and mechanical problem-solving.

Students are trained in professional driving, traffic rules, vehicle control, and basic transport management. They also study motor vehicle mechanics, including engine systems, electrical systems, servicing, fault diagnosis, and repair. The school prepares learners for careers as professional drivers, mechanics, fleet operators, and for self-employment in the automotive industry.

13. School of Cookery

The School of Cookery trains learners in the art and science of food preparation, nutrition, and kitchen management. It focuses on developing practical culinary skills, creativity, hygiene, and professionalism in the food industry.

Students are taught cooking techniques, baking, food safety, nutrition, menu planning, and catering services. The school also introduces hospitality skills and basic entrepreneurship, preparing learners for careers in restaurants, hotels, catering companies, and self-employment.

ADMINISTRATIVE STRUCTURE

Department of the Principal Director

Department of Administration

Department of non Teaching Stuff Management

Department of Finance, Procurement and Store management

Department in Charge of Curriculum and Examination

Department of Registration, Publicity and Marketing

Department of Management and Quality Assurance

Making Reports

Gathering Data

Intake and Out-take of workers

Human Resource Unity

Mr. Musoke James Walakira is a visionary and passionate advocate for quality, inclusive, and skills-based education. He strongly believes that true education should go beyond classroom theory to include creativity, innovation, discipline, and practical life skills. This belief has inspired him to design progressive learning models that respond to the changing needs of society and the modern world.

Driven by a desire to empower young people, the author focuses on creating educational structures that nurture academic excellence while also developing technical abilities, talent, and entrepreneurship. He is particularly interested in building institutions that help learners discover their potential, build confidence, and become self-reliant, responsible citizens.

Through this work, the author seeks to contribute to the growth of education systems that prepare students not only for examinations, but also for real-world challenges, leadership, and lifelong learning.
