

Colorful Paper Mâché fruits

for Early Childhood Learning

creative. interactive. Educational. Eco-friendly

Introduction

This project focuses on creating educational fruit models for nursery students using the paper mâché technique. The aim is to combine creativity, art, and learning to help young children understand different fruits through interactive visual materials. The project also promotes the use of affordable and environmentally friendly materials in educational design and printing

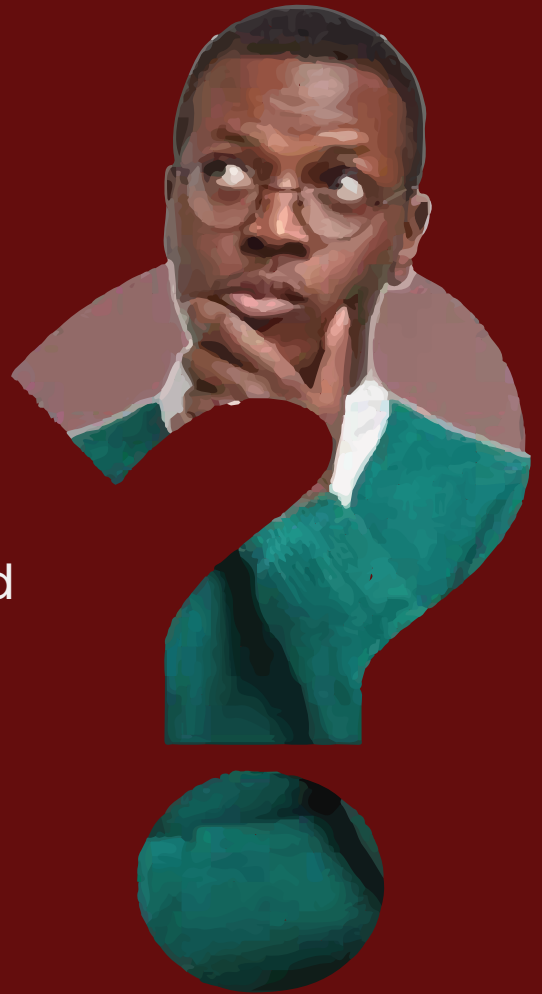

Background of the Study

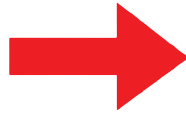

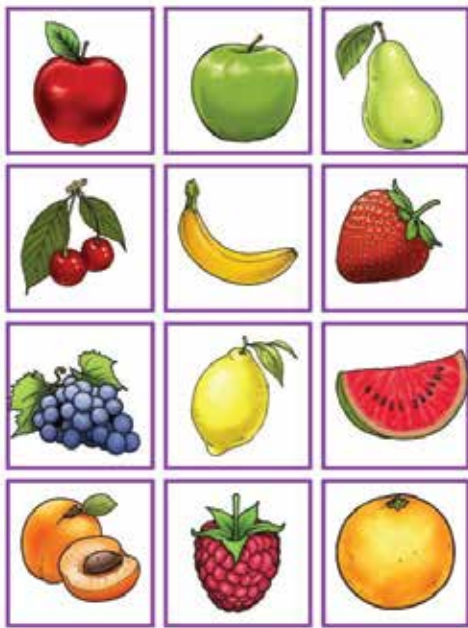

Children in nursery schools learn better through visual and practical materials. Many schools mainly use charts and drawings, which may not fully capture children's attention. Paper mâché provides an opportunity to create colorful and realistic fruit models that make learning more enjoyable, interactive, and memorable for nursery learners.

Problem Statement

Many nursery schools lack creative and interactive teaching aids that can effectively engage children during learning. Printed charts alone may not provide enough interaction for learners. Therefore, there is a need to design educational materials that are attractive, practical, affordable, and suitable for nursery education

Aim of the Project

The aim of this project is to design and produce paper mâché fruit models that can be used as educational learning aids for nursery students.

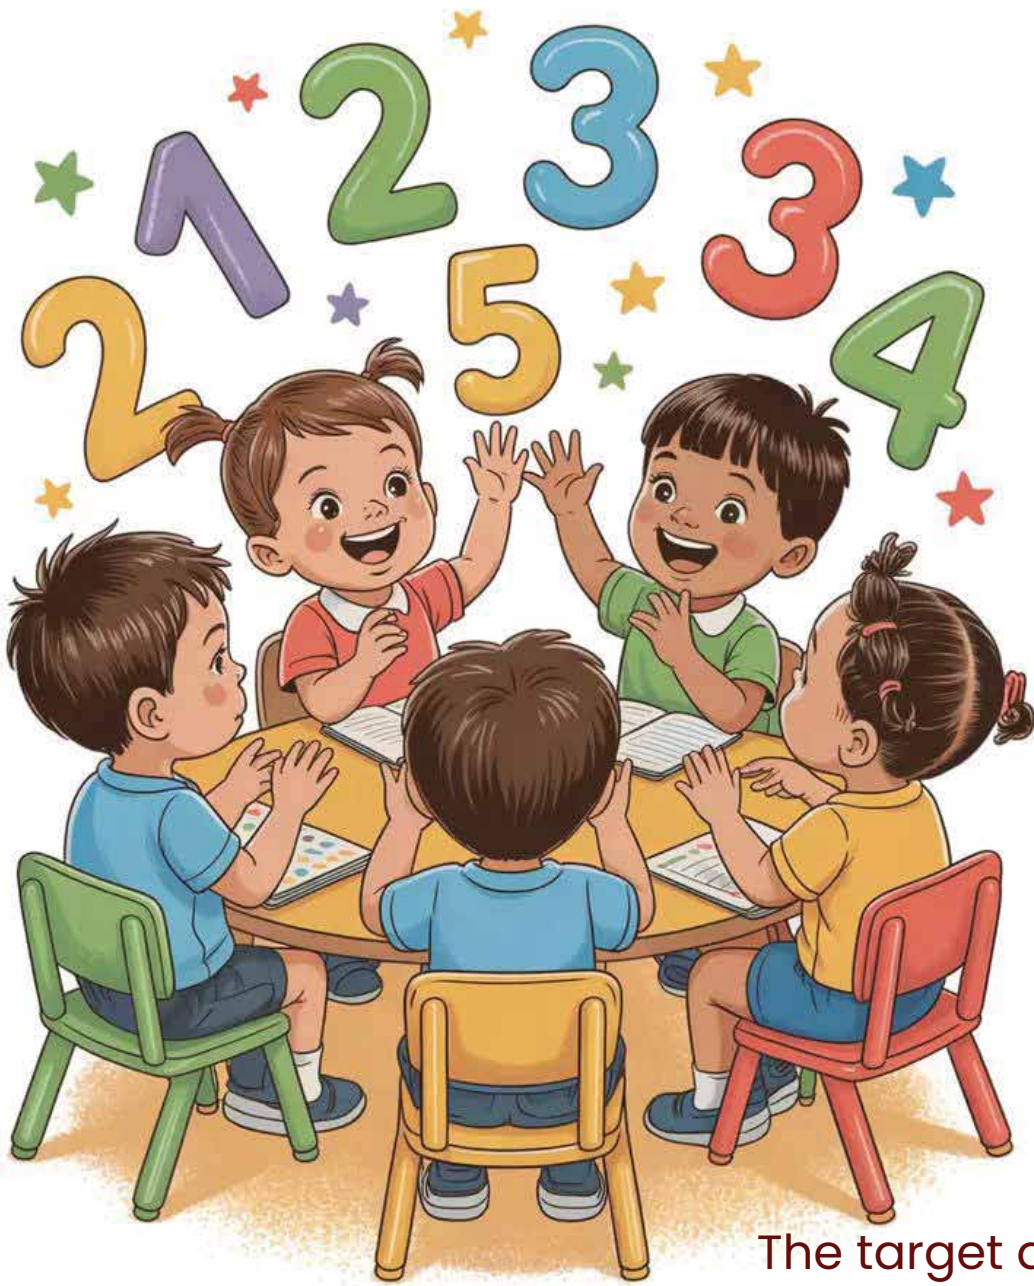

Objectives of the Project

- To create different fruit models using paper mâché technique.
- To promote interactive learning among nursery students.
- To produce affordable and eco-friendly educational materials.
- To improve children's understanding of fruits, colors, and shapes

Target Audience

The target audience for this project includes nursery school children, nursery teachers, parents, and early childhood learning centers. The project is mainly intended to support young learners during classroom activities.

newspapers
glue
fruit moulds
water
scissors
paint
brushes
varnish
colored paper

Technique Process

Prepare the mould for the desired fruit size
Tear newspapers into strips
Mix glue with water
Dip paper strips into glue mixture
Make layer strips around the mould
cut and remove the mould
stick back together and allow to dry
Paint according to the fruit type
Do the finishing

PAPER LAYERING

Tear newspapers into small strips and layer them on the balloon using glue.

DRYING

Allow the layered paper to dry completely. This may take 24–48 hours.

PAINTING

Apply base coat and paint the fruit with bright and attractive colors.

ADDING DETAILS

Add stems, leaves and other details. Let the paint dry completely.

FINISHING

Seal with varnish for durability and a smooth finish. Your paper mâché fruit is ready!

Importance of the Project

This project helps improve interactive learning among nursery students. It also promotes creativity, environmental awareness through recycling, and the use of affordable educational materials. The colorful fruit models make learning more enjoyable and engaging for children.

outcome

Conclusion

The paper mâché fruit project is a creative educational solution that combines art, printing, and child learning. The project provides nursery students with interactive learning materials that are colorful, affordable, and environmentally friendly. It also promotes creativity and practical learning in early childhood education.

THANK YOU
